

Type	Description	Evaluation	Choose your preprint server:	OA Resources
<b>Diamond</b> (Gold without APCs)  Choose <i>Diamond</i> if there is a high-quality journal in your field.	<ul style="list-style-type: none"> <li>Free to read</li> <li>Free to publish</li> <li>Authors retain rights to their work</li> </ul>	Positive: Free and immediate dissemination of knowledge. <b>Creating high-quality diamond OA journals that are independent from commercial publishers is the current</b>	<b>Commercial</b>  	<b>oa.finder:</b> <a href="https://finder.open-access.network">finder.open-access.network</a> Get information about OA type, APCs and funding options for journals.
<b>Gold</b> (with APCs)  Choose gold if APCs are justified and ask your library if there is OA funding.	<ul style="list-style-type: none"> <li>Free to read</li> <li>Pay to publish</li> <li>Author Processing Charges (APCs) range from €100 to over €10,000 for articles, and up to €20,000 for books.</li> </ul>	Positive if the APC/BPCs are transparently justified and the amount is justified (e.g. costs of several hundred Euros to finance a non-profit organization and pay for the type setting).	<b>vs.</b> <b>non-profit</b>   	<b>Open policy finder:</b> <a href="https://openpolicyfinder.jisc.ac.uk/">openpolicyfinder.jisc.ac.uk/</a> Get information about what rights you keep when publishing at a journal.
<b>Green</b>  Go for green if your article has been published in a closed access journal first.	<ul style="list-style-type: none"> <li>Free to read and free to publish</li> <li>Can be used with closed or open access</li> <li>Authors can share their version (e.g. preprint, repository, website)</li> <li>Check version rights: <a href="https://openpolicyfinder.jisc.ac.uk">openpolicyfinder.jisc.ac.uk</a></li> </ul>	<b>Positive</b> if the published version can be republished (same page, easy to cite); often only allowed for accepted versions or after an embargo. Green OA is a good short-term strategy to complement closed access at no extra cost.		<b>Open APC:</b> <a href="https://treemaps.openapc.net/apcdata/openapc/publisher#/period=">treemaps.openapc.net/apcdata/openapc/publisher#/period=</a> Browse costs of open access by period, institution, and publisher.
<b>Hybrid</b>  Try to avoid hybrid – if you have no choice, only go for the OA option if there is funding.	<ul style="list-style-type: none"> <li>Pay to publish</li> <li>Pay to read (e.g., via subscription model)</li> <li>Authors can decide for each article if they want to publish it as free to read against a fee</li> </ul>	Negative due to “double dipping” - universities then pay twice: for subscription (=read access) + open access.		<b>OA monitor:</b> <a href="https://open-access-monitor.de">open-access-monitor.de</a> Explore prevalence of business models over time and by institution.
<b>Closed</b>  Try to avoid closed. If needed, complement it with green.	<ul style="list-style-type: none"> <li>Free to publish</li> <li>Pay to read (e.g., via subscription model)</li> </ul>	<b>Negative:</b> Research is often publicly funded and should be accessible to all. Authors are encouraged to also publish their version as Green Open Access..	<b>Learn more at:</b> 	<b>OA at University of Münster:</b> <a href="https://uni.ms/openaccess">uni.ms/openaccess</a> Explore OA offerings, statements, and go Open Access.
